1. Background: Why CAS Monitoring Is Difficult

Creativity, Activity, Service (CAS) is a core component of the IB Diploma Programme. In the current CAS requirements as of March 2026, every DP student must complete CAS over approximately 18 months, demonstrating engagement across all three strands and achieving all seven CAS Learning Outcomes. Students record their experiences, reflections, and projects on ManageBac, and CAS advisors are responsible for reviewing this work, providing feedback, and ensuring students stay on track.

In practice, this monitoring is difficult to do well. The challenge is one of scale and visibility:

- Each student may have 10–30+ individual CAS experiences, each with its own status, supervisor, reflection count, and date range.
- Advisors typically supervise 2-8 students each, but many advisors have full teaching loads and CAS is not their main responsibility.
- ManageBac provides no automated alerts when a student has gaps in activity, is falling behind on Learning Outcomes, or has experiences sitting unapproved for weeks.
- The CAS Coordinator must manually check dozens of student profiles, cross-reference data across multiple tabs, and chase both students and advisors individually.
- Problems are typically discovered too late — often at the CAS interview stage or near graduation — when they are much harder to fix.

The CAS Reminders and Monitoring system (CRM) was built to solve this problem. It is a fully automated, rule-based evaluation and reminder programme — not an AI system — that checks CAS data against configurable rules, flags issues early, and sends targeted reminders to students and their advisors, all without requiring the coordinator to manually inspect every student’s profile.

2. What CRM Does

CRM is an automated workflow that reads CAS data exported from ManageBac, checks it against a configurable set of rules, and sends email reminders to students, CAS advisors, and the CAS Coordinator. It runs on Make.com (a cloud-based automation platform) and uses Google Sheets to hold the exported data and settings.

Important: CRM does not use artificial intelligence. It is an entirely rule-based system. Every check follows explicit, predictable rules (e.g. “is this experience’s status set to Approved?” or “are there large gaps in the student’s CAS timeline?”). There are no AI models, no machine learning, and no subjective judgements involved. The system does exactly what the settings tell it to do, and nothing more.

The scenario can be configured to run on any schedule that suits the school — weekly, fortnightly, monthly, or entirely on-demand (triggered manually from the Make.com dashboard). There is no fixed schedule built into the system; the CAS Coordinator chooses when and how often to run it based on the school’s needs and the time of year.

The diagram below shows the overall system:

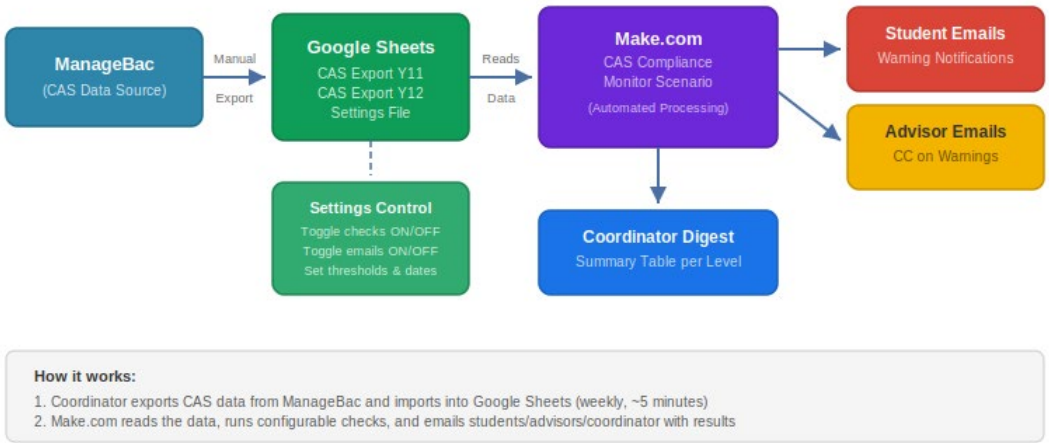

Figure 1: System overview — data flows from ManageBac through Google Sheets to Make.com, which sends emails

In short: the CAS Coordinator exports data from ManageBac on whatever schedule they choose, drops it into a Google Sheet, and the system does the rest. The total effort per run is approximately five minutes of manual work.

3. Feature Overview: The Seven Checks

CRM performs seven independent checks on each student's CAS data. Each check can be individually turned on or off in the settings file, and disabled checks consume no processing credits.

Check	What It Looks For	Why It Matters	Setting Name
Unapproved CAS	Experiences with status "To Be Determined" — submitted by student but not yet approved by their advisor.	Students cannot receive credit for unapproved work. Advisors may not realise they have pending items.	Check Unapproved CAS
Unreviewed CAS	Experiences whose end date has passed but have not been reviewed by the advisor.	Completed experiences should be reviewed promptly. Backlogs create stress at interview time.	Check Unreviewed CAS
Missing Supervisor	Experiences where ManageBac shows "N/A" in the supervisor field.	Every experience needs a named supervisor. Missing supervisors suggest the experience was not properly set up.	Check Supervisor Name
CAS Project	Whether the student has at least one CAS Project registered.	A CAS Project is a mandatory IB requirement. Students without one need early intervention.	Check Project CAS
Outcomes	Whether the student's achieved Learning Outcomes are below the expected number for the time elapsed in the programme.	Students need all 7 Learning Outcomes by the end of CAS. Falling behind early is a warning sign.	Check Outcomes
Timeline Gaps	Periods where the student had no CAS activity for more than a specified number of consecutive days.	CAS should be sustained engagement, not last-minute cramming. Long gaps suggest disengagement.	Check Timeline Gaps
Reflections	Whether the average number of reflections/evidence items per experience falls below a minimum threshold.	Reflection is central to CAS. A low ratio may indicate superficial engagement or missing documentation.	Check Reflections

Tip: For Year 11 students who are just starting CAS, you might want to keep Timeline Gaps, Outcomes, and Reflections turned off and focus on the basic hygiene checks (Unapproved, Unreviewed, Supervisor, Project). Turn on the remaining checks for Year 12 when students should be further along.

4. User Guide: Standard Workflow

Once the system is set up (see Section 9), the workflow for each run requires only three manual steps, taking approximately five minutes in total. How often you run it is entirely up to you — weekly, fortnightly, monthly, or on-demand.

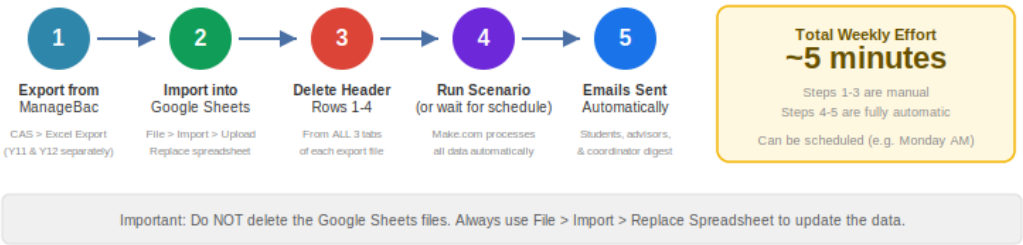

Figure 2: Weekly workflow — three manual steps followed by automatic processing

Step 1: Export from ManageBac

In ManageBac, navigate to CAS and export the data as an Excel file. You need to do this separately for each year level (Y11 and Y12). Save the files to your computer.

Step 2: Import into Google Sheets

Open the permanent Google Sheet for that year level (e.g. **CAS_Export_Y11**). Go to **File** → **Import** → **Upload**, select the exported file, and choose **"Replace spreadsheet"**. Repeat for the other year level.

> **Important:** Do NOT delete the Google Sheets files and create new ones. The Make.com scenario is linked to these specific files. Always use Import → Replace Spreadsheet to update the data.

Step 3: Delete ManageBac Header Rows

ManageBac exports include 3–4 header rows at the top (school name, class info, etc.) that are not part of the data. You must delete these rows from **all three tabs** (Summary, Experiences by Student, Projects by Student) of each export file. After deletion, Row 1 of each tab should be the column headers (e.g. "Student ID", "Student Name", etc.).

Step 4: Done — The System Runs Automatically

The Make.com scenario either runs on a schedule (e.g. every Monday morning) or you can trigger it manually from the Make.com dashboard. When it runs, it reads the data, performs all enabled checks, and sends the appropriate emails. You will receive a coordinator digest email summarising the results.

5. Settings Reference

All configuration is done in a single Google Sheets file (See Appendix). This file has three sheets:

Settings Sheet

This is where you control the system's behaviour. Settings are grouped into five sections:

Coordinator & School — Your name, email address, and school name. The coordinator email receives digest summaries and error notifications.

Year Levels — Toggle each year level (Y11, Y12) on or off, and set the maximum number of students and experiences to process. The "Run This Level" toggle lets you skip a year level entirely (useful during holidays or if one cohort has completed CAS).

Email Toggles — Control whether emails are sent to students, advisors, and/or the coordinator. See Section 7 for the full email routing logic.

Check Toggles — Turn each of the seven checks on or off independently, per year level. Disabled checks are completely skipped and use no Make.com credits.

Timeline & Thresholds — Set CAS start/end dates for each cohort, the maximum allowed gap in days, the minimum evidence-per-experience ratio, and Learning Outcomes parameters.

> **Important:** All TRUE/FALSE values must be typed exactly as TRUE or FALSE (not Yes/No, not 1/0). Dates must be in YYYY-MM-DD format. Do not rename sheets, column headers, or reorder rows.

CAS Advisors Sheet

A simple list of advisor names and their email addresses. Advisor names must match exactly how they appear in the ManageBac export. When "Send Advisor Emails" is enabled, the system looks up each student's advisor from the export data and matches it against this list to find the correct email address.

Instructions Sheet

A built-in reference sheet within the settings file itself, containing setup steps, module reference, and workflow reminders. This is provided as a quick-reference for the coordinator and can be printed or consulted independently of this document.

6. How the System Processes Data

This section explains what happens inside the Make.com scenario when it runs. Understanding this is not required for day-to-day use, but will be helpful for troubleshooting or if you need to modify the system in the future.

The scenario processes data in five phases:

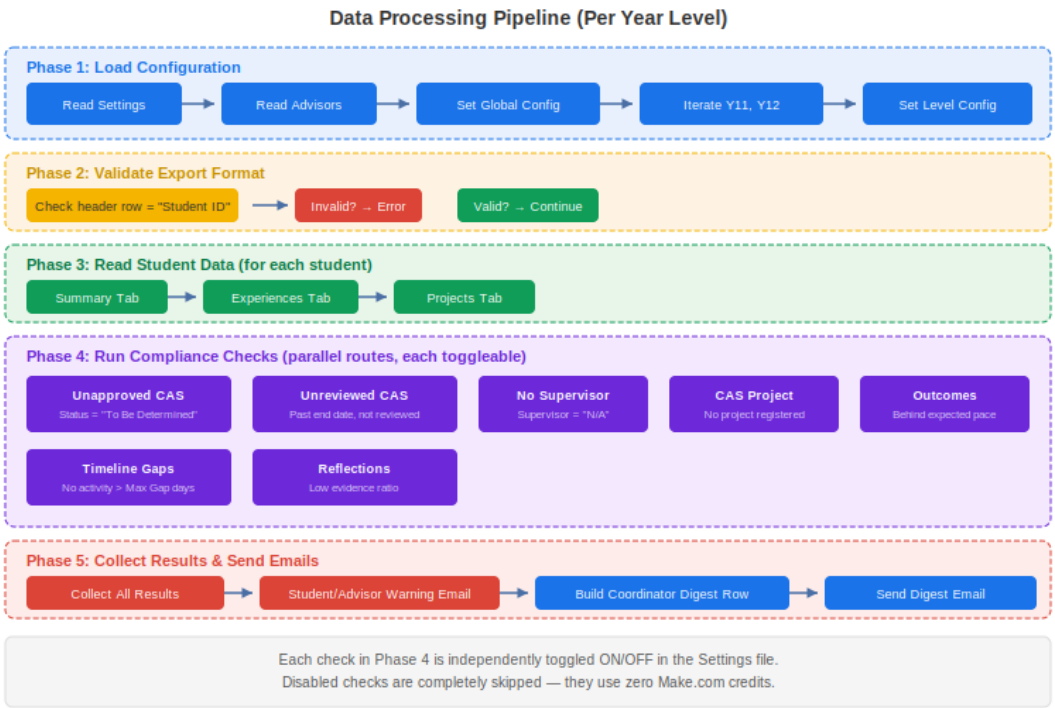

Figure 3: Data processing pipeline — five phases from loading settings to sending emails

Phase 1: Load Configuration

The scenario begins by opening three Google Sheets files: the Settings file, the Y11 CAS export, and the Y12 CAS export. It reads all settings and the CAS Advisors list, storing them as variables. It then creates a loop that will process each year level in turn (Y11 first, then Y12). If a year level's "Run This Level" toggle is set to FALSE, that level is skipped entirely.

Phase 2: Validate Export Format

Before processing any student data, the system checks that the export file is correctly formatted by verifying that cell A1 of the Summary tab contains "Student ID". If this check fails (typically because the ManageBac header rows were not deleted), the system sends an error email to the coordinator explaining the problem and does not send any student emails for that level. This prevents false alerts from corrupted data.

Phase 3: Read Student Data

For each student in the Summary tab, the system reads their data from all three tabs of the export: the Summary (overview statistics), Experiences by Student (individual CAS experience details), and Projects by Student (CAS project information). This data is loaded into the system's working memory for the checks that follow.

Phase 4: Run Checks

This is where the actual analysis happens. The seven checks run in parallel routes (independent processing branches). Each route is gated by its toggle setting — if a check is disabled, its route does not execute at all.

Each check examines the student's data and produces a result (e.g. a list of unapproved experiences, a count of missing supervisors, an outcome status of "Behind" or "On Track"). These results are saved as variables that the next phase can read.

Phase 5: Collect Results and Send Emails

After all checks complete for a student, the system collects all the results into a single set of variables. It then decides whether to send emails based on two conditions: (a) whether any issues were found for that student, and (b) whether the relevant email toggles are enabled.

At the end of all students for a year level, if the Coordinator Digest is enabled, the system sends a summary email to the coordinator containing a table of all students and their check results.

How Data Is Ingested from the ManageBac Export

The CRM scenario reads data from three tabs in each CAS export Google Sheet. The system expects the ManageBac CAS Excel export format and relies on specific column positions and tab names. The key dependencies are:

- **Summary tab** — Module 20 reads this tab. It expects "Student ID" in column A, student name in columns B–C (first/last name), email address, CAS advisor name, number of experiences, Learning Outcomes achieved, and related summary fields. The validation check (Module 12) specifically looks for "Student ID" in cell A1.
- **Experiences by Student tab** — Modules 21, 31–34, 37, and 52 read this tab. It expects columns for Student ID, student name, experience title, experience status (e.g. "To Be Determined", "Approved"), supervisor name, CAS strand, start date, end date, and evidence/reflection count. The checks filter rows by Student ID to find each student's individual experiences.
- **Projects by Student tab** — Module 23 reads this tab. It checks whether a student has any CAS Project entries. The system filters by Student ID and looks for a project title in the relevant column.

Important: This system is built for the current format of the ManageBac CAS Excel export (as of 2025–2026). If ManageBac changes the column order, column names, tab names, or overall structure of the export file in a future update, the scenario will need to be edited. The modules listed above (particularly Modules 12, 20, 21, 23, and the check modules 31–58) are where column references would need to be updated. Consult the module reference in the Instructions sheet of the Settings file to identify which modules to modify.

7. Email Routing and Modes

The system has three email toggles that control who receives what. These can be set independently per year level:

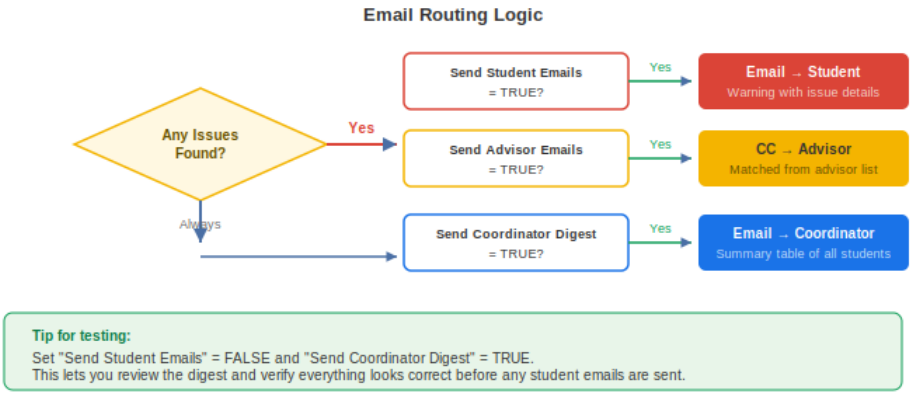

Figure 4: Email routing logic — three independent toggles control recipients

The toggles combine to support several common modes of operation:

Students	Advisors	Digest	What Happens
TRUE	TRUE	TRUE	Full operation — students receive warning emails, advisors are CC'd, coordinator gets summary.
TRUE	FALSE	TRUE	Students get warnings, advisors not copied, coordinator gets summary.
FALSE	TRUE	TRUE	Advisors receive reports about their students, coordinator gets summary. Students not emailed.
FALSE	FALSE	TRUE	Testing mode — only the coordinator receives the digest. No student or advisor emails sent.

Tip: Always start with the testing mode (Student=FALSE, Advisor=FALSE, Digest=TRUE) when running the system for the first time or after making changes to settings. Review the digest to verify everything looks correct before enabling student emails.

8. About Make.com: Platform, Costs, and Security

What Is Make.com?

Make.com (formerly known as Integromat) is a cloud-based automation platform. It allows you to build “scenarios” — automated workflows that connect different services (in our case, Google Sheets and Gmail) and process data according to rules you define. Make.com provides a visual drag-and-drop interface for building these workflows. No programming is required to use or modify the CRM scenario, though understanding the module structure (see Section 6) is helpful for advanced changes.

The CRM scenario is hosted on Make.com’s EU servers (eu1.make.com) and runs either on a schedule or when manually triggered.

Industry Standing

Make.com is one of the leading workflow automation platforms globally, alongside Zapier and Microsoft Power Automate. It is owned by Celonis SE, a German enterprise software company. Make.com offers over 3,000 pre-built integrations with services including Google Workspace, Microsoft 365, Slack, Salesforce, and many others. It is used across industries by businesses of all sizes, from freelancers and small teams to large enterprises, for automating repetitive tasks and connecting applications. The platform is well-established, with a large active user community and comprehensive documentation.

How Pricing Works

Make.com uses a credit-based pricing model. Each “module action” in the scenario (such as reading a row from Google Sheets, sending an email, or setting a variable) consumes one credit. The actual credit cost of each CRM run depends on how many checks are enabled and how many students are being processed.

As a practical estimate: for a cohort of around 30 students with an average of 10 CAS experiences each, a single run of the scenario consumes approximately 300–800 credits, depending on which checks are turned on. CAS Coordinators can decide how often to run the checks (weekly, fortnightly, monthly, or on-demand) and which checks to enable, giving full control over credit usage.

Make.com offers a Free plan with 1,000 credits per month. This is enough to run the full CRM scenario at least once per month, which makes it a useful way to trial the system at no cost before committing to a paid plan. For more frequent runs, the Core plan at approximately US$9 per month (billed annually) provides 10,000 credits — more than enough for weekly runs at most small IB schools, with room to spare.

> **Important:** If you exceed your monthly credit allowance, scenarios pause automatically (Make.com does not charge overage fees by default). You will receive email warnings at 80% and 100% usage. Disabling unnecessary checks and running less frequently will reduce credit consumption.

Security and Data Protection

Make.com takes security seriously, which is critical given that the CRM system processes student names and email addresses. When setting up this system, schools must be aware of their local data privacy obligations:

- **GDPR Compliant** — Make.com (owned by Celonis SE) is fully compliant with the EU General Data Protection Regulation. They provide a Data Processing Agreement (DPA) that schools can sign.
- **SOC 2 Type II Certified** — independently audited security controls covering data handling, access, and availability.
- **ISO 27001 Certified** — international standard for information security management systems.
- **AES-256 Encryption** — all data at rest is encrypted using the industry-standard AES-256 algorithm. Network communication uses TLS 1.2/1.3.

Data Residency and Server Locations:

Make.com offers users the choice of hosting their scenarios in either the United States (us1.make.com) or the European Union (eu1.make.com).

- **Choose the appropriate region:** The CAS Coordinator or IT Administrator setting up the Make.com account must select the server region that complies with their school's local and national data privacy laws.
- **Legal Responsibility:** The school acts as the Data Controller. It is the school's responsibility to ensure that exporting data from ManageBac and processing it via Make.com complies with local regulations. For example, schools in the EU or those catering to European students should typically select the EU server to comply with GDPR. Schools in regions with strict data localization laws (where data is legally forbidden from leaving the country) must verify if utilizing international cloud services is permissible under their jurisdiction.

What Data Does the System Access?

The CRM scenario accesses only the following data:

- Read Only: The three Google Sheets files (Settings, Y11 Export, Y12 Export).
- Send Only: Gmail, to send warning and digest emails from the coordinator's school email address.

The scenario does not write back to any spreadsheet, does not access ManageBac directly, and does not store student data on Make.com’s servers beyond the execution log (which is retained for 30 days by default).

9. First-Time Setup

This section is for the person who is setting up the system for the first time, or re-configuring it after a handover. You only need to do this once.

1. **Create a Make.com account** at make.com. The Free plan is fine for initial testing; upgrade to Core when ready for regular use.
2. **Upload the Settings file** to a Google Drive folder and convert it to Google Sheets. Update your coordinator details in the Settings sheet.
3. **Create two blank Google Sheets** in the same folder: “CAS_Export_Y11” and “CAS_Export_Y12”. These are the permanent files that will hold your exported data.
4. **Import the blueprint JSON** into a new Make.com scenario. The blueprint file (CAS_Reminders_Monitoring.blueprint.json) contains the entire workflow definition.
5. **Re-link your Google Sheets and Gmail connections** in each module. Make.com will prompt you to authenticate with your Google account.
6. **Configure the three source modules (one time only):**
   - Module 1 (Load Settings File) — select your Settings Google Sheet
   - Module 2 (Load CAS Export Y11) — select your Y11 export Google Sheet
   - Module 3 (Load CAS Export Y12) — select your Y12 export Google Sheet

Figure 5: Configuring Module 1, 2 and 3 on your scenario on Make.com.

7. **Do a test run** with “Send Student Emails” set to FALSE and “Send Coordinator Digest” set to TRUE. Import some real CAS export data first (following the weekly workflow in Section 4).
8. **Review the digest email**. Check that the student names, issue counts, and check results look correct. If everything is right, adjust the email toggles as needed and set the scenario to run on a schedule.

Important: You only configure Modules 1, 2, and 3 once. All other modules reference these three automatically. Do not modify any other modules unless you understand the scenario structure.

10. Troubleshooting

Problem	Solution
I received a “Format Error” email	The ManageBac header rows (rows 1–4) were not removed from one or more tabs. Open the export file, delete the non-data rows from all three tabs, and re-run the scenario.
The scenario ran but no emails were sent	Check the email toggles in Settings. If all three are FALSE, no emails will be sent. Also check that “Run This Level” is TRUE for the levels you want to process.
The digest shows all “-” for a check column	That check is disabled (set to FALSE) in Settings. The “-” indicates the check was skipped, not that there are no issues.
I accidentally deleted a CAS export Google Sheet	Check Google Drive Trash first. If it’s gone, create a new blank Google Sheet and reconfigure Module 2 (for Y11) or Module 3 (for Y12) in Make.com to point to the new file.
I accidentally deleted the Settings file	Check Google Drive Trash. If gone, upload a fresh copy of the Settings Excel file, convert to Google Sheets, update your details, and reconfigure Module 1 in Make.com.
An advisor is not receiving emails	Check the CAS Advisors sheet in Settings. The advisor name must match exactly how it appears in the ManageBac export (including spaces and capitalisation). Also ensure their email address is filled in.
Make.com says my credits are running out	Consider disabling checks you don’t need, reducing run frequency, or upgrading your Make.com plan. Each disabled check saves credits. Running fortnightly instead of weekly halves credit usage.
I need to update timeline dates for a new academic year	Open the Settings file in Google Sheets and update the Timeline Start Date and Timeline End Date values for each year level. No changes needed in Make.com.

11. Appendix: Settings File at a Glance

The screenshot below shows the Settings sheet as it appears in Google Sheets. This is the single file where all CRM behaviour is configured. The colour-coded section headers and TRUE/FALSE conditional formatting make it easy to see at a glance which checks and email options are active for each year level.

	A	B	C	D	E
1	**Coordinator & School**				
2	**Setting**	**Value**		**Notes**	
3	Coordinator Name	Miss CAS		*Name at end of email*	
4	Coordinator Email	cascoord@school.edu		*Digest and error emails are sent here*	
5	School Name	My School			
6					
7	**Year Levels**				
8	**Setting**	**Year 11**	**Year 12**	**Notes**	
9	Run This Level	TRUE	FALSE	*Set TRUE or FALSE to choose which level to run. Full CAPITALS.*	
10	Max Students per Class	30	30	*Maximum students the scenario will process per level*	
11	Max Experiences per Student	80	80	*Maximum CAS experiences per student over 18 months*	
12	Max Projects per Student	10	10	*Maximum CAS projects per student*	
13					
14	**Email Toggles**				
15	**Setting**	**Year 11**	**Year 12**	**Notes**	
16	Send Student Emails	TRUE	TRUE	*TRUE = Send reports to students. FALSE = Reports not sent.*	
17	Send Advisor Emails	TRUE	TRUE	*Send reports to advisors. (Reports will CC to advisors if Student Emails also TRUE.)*	
18	Send Coordinator Digest	TRUE	TRUE	*Summary email to coordinator*	
19					
20	**Check Toggles**				
21	**Setting**	**Year 11**	**Year 12**	**Notes**	
22	Check Unapproved CAS	TRUE	TRUE	*Experiences with status 'To Be Determined'*	
23	Check Supervisor Name	TRUE	TRUE	*Experiences with no supervisor listed*	
24	Check Reflections	FALSE	TRUE	*Low evidence-to-experience ratio (Check Min Evidence per Experience setting)*	
25	Check Timeline Gaps	FALSE	TRUE	*No CAS activity for longer than Max Gap days (Nb: Computationally expensive!)*	
26	Check Unreviewed CAS	TRUE	TRUE	*Experiences past end date but not reviewed*	
27	Check Project CAS	TRUE	FALSE	*Student has no CAS Project registered*	
28	Check Outcomes	TRUE	TRUE	*Learning Outcomes below expected for time elapsed*	
29					
30	**Timeline**				
31	**Setting**	**Year 11**	**Year 12**	**Notes**	
32	Timeline Start Date	2025-04-01	2024-04-01	*CAS start for this cohort. Format: YYYY-MM-DD*	
33	Timeline End Date	2026-10-31	2025-10-31	*CAS end for this cohort. Format: YYYY-MM-DD*	
34	Max Gap (days)	31	31	*Flag if no activity for this many consecutive days*	
35					
36	**Thresholds**				
37	**Setting**	**Year 11**	**Year 12**	**Notes**	
38	Min Evidence per Experience	1	1	*Minimum average reflections/evidence per experience*	
39					
40	**Outcomes**				
41	**Setting**	**Value**		**Notes**	
42	Months to Complete All Outcomes	15		*All 7 outcomes expected by this month. Formula: ceil(months / 15 x 7)*	
43	Total Learning Outcomes	7		*IB requires 7 CAS Learning Outcomes*	
44					

Figure 6: The Settings sheet in Google Sheets — all configuration in one place

In this example, the coordinator details are set to placeholder values (which you would replace with your own). Year 11 is set to run with the core checks enabled (Unapproved, Supervisor, Unreviewed, Project, Outcomes), while Reflections and Timeline Gaps are turned off — appropriate for students still early in their CAS journey. Year 12 is currently set to FALSE for “Run This Level”, meaning it would be skipped entirely (useful if that cohort has completed CAS). The Notes column on the right explains each setting. Note the comment on Timeline Gaps: “Computationally expensive!” — this check uses more Make.com credits than the others, so enable it selectively.

To change any setting, simply edit the value in the relevant cell directly in Google Sheets. Changes take effect the next time the scenario runs — there is no need to modify anything in Make.com.

Files You Will Need

1. CAS_Scenario_Settings.xlsx — the configuration file (upload to Google Drive and convert to Sheets)

2. CAS_Monitor_with_Settings_blueprint.json — the Make.com scenario blueprint (import into Make.com)

3. This document — for reference by the coordinator and school administration
